**Subject:** Odp: Incremental capacity project proposal for the Mosonmagyaróvár interconnection point - observation

Dear all,

We have read the observations shared by Slovak TSO - eustream to the case of the incremental capacity project proposal for the Mosonmagyaróvár interconnection point.

Based on available information, we fully support

- a) the standpoints presented in the eustream paper, in particular with regard to the use of existing infrastructure
- b) the conclusion that the decision of the MEKH seems to be reasonable, meeting the criteria of effectiveness, supporting the regional cooperation and supportive for development of fully functional and efficient gas market in the CEE region.

ACER competence at question in this case – Article 8 of the Regulation 713/2009 could be read and interpreted as it is applicable only for existing infrastructure

Best regards
