A Bridge to 2025 - Public Consultation Paper

Dear Sirs and Madams!

According our ongoing engagement for European integration and harmonization of wholesale markets for electricity and of integration of European markets for Ancillary Services we welcome the engagement of ACER for further developments.

We promote the intention to proceed according this ACER-initiative since the draft Paper is generally in line with the target model for the European Electricity Market developed by the Project Coordination Group which was established by the European Commission for this purpose and the ongoing discussions regarding the future development of the European infrastructure and markets for electricity.

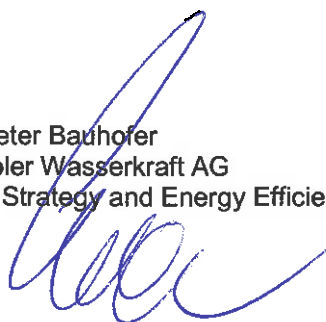

According the positions of our sector associations EURELECTRIC and Oesterreichs Energie we promote the establishment of larger market regions in order to increase liquidity - with price areas orientated more on physical realities than on national borders.

Regarding the future roles of TSOs and DSOs we want to state that any information regarding market relevant issues has to be available in the same manner for all market participants. As well all short term information as also any information which is used for long term planning and definition of several products (including reserves and ancillary services) has to be available in a transparent manner for all market participants according the actual legal requirements. This includes also the stakeholder involvement regarding any market relevant preparatory work on issues of market regulation and infrastructural (grid) development.

With best regards,

Dr. Peter Badhofer
TIWAG-Tiroler Wasserkraft AG
Department for Energy Strategy and Energy Efficiency
